

The PALSSM Diabetic Program

Diabetes Management is a critical component in the overall care of many seniors. **The PALSSM Diabetic Program** offers a complete care program designed to enhance the health and well-being for those with Type 1 or 2 Diabetes.

Our comprehensive program provides:

- Geriatric-, Home Health- and Diabetic-trained nurses
- A Medical Director, Dr. John H. Fullerton (Geriatrician/Internal Medicine) certified by The American Medical Directors Association (AMDA) and American Geriatric Society (AGSF)
- Patient/Family and staff education on diabetic patient care in the Assisted Living setting, with emphasis on Hypo/Hyperglycemic reactions and emergency responses
- A clinical and medical team working in conjunction with the resident's current Primary Care Provider and/or Endocrinologist and reporting 'any change in condition'
- Materials and resources certified by AMDA which includes a diabetic tool kit with policies and procedures for Assisted Living
- Nursing services provided 7 days a week

A Health Care Team is Vital. People with diabetes have a multi-system chronic disease best monitored and managed by highly skilled health care professionals.

The PALSSM Diabetic Program is a physician-based program.
That is our difference. A difference that matters!
